LAB 05

It could have been much worse, in two frames

TRIES

The talk's animation M02 on paper in two stills frozen on its own clock: one public incident, then both side by side with the line the room was left with. No words added but the time and a caption.

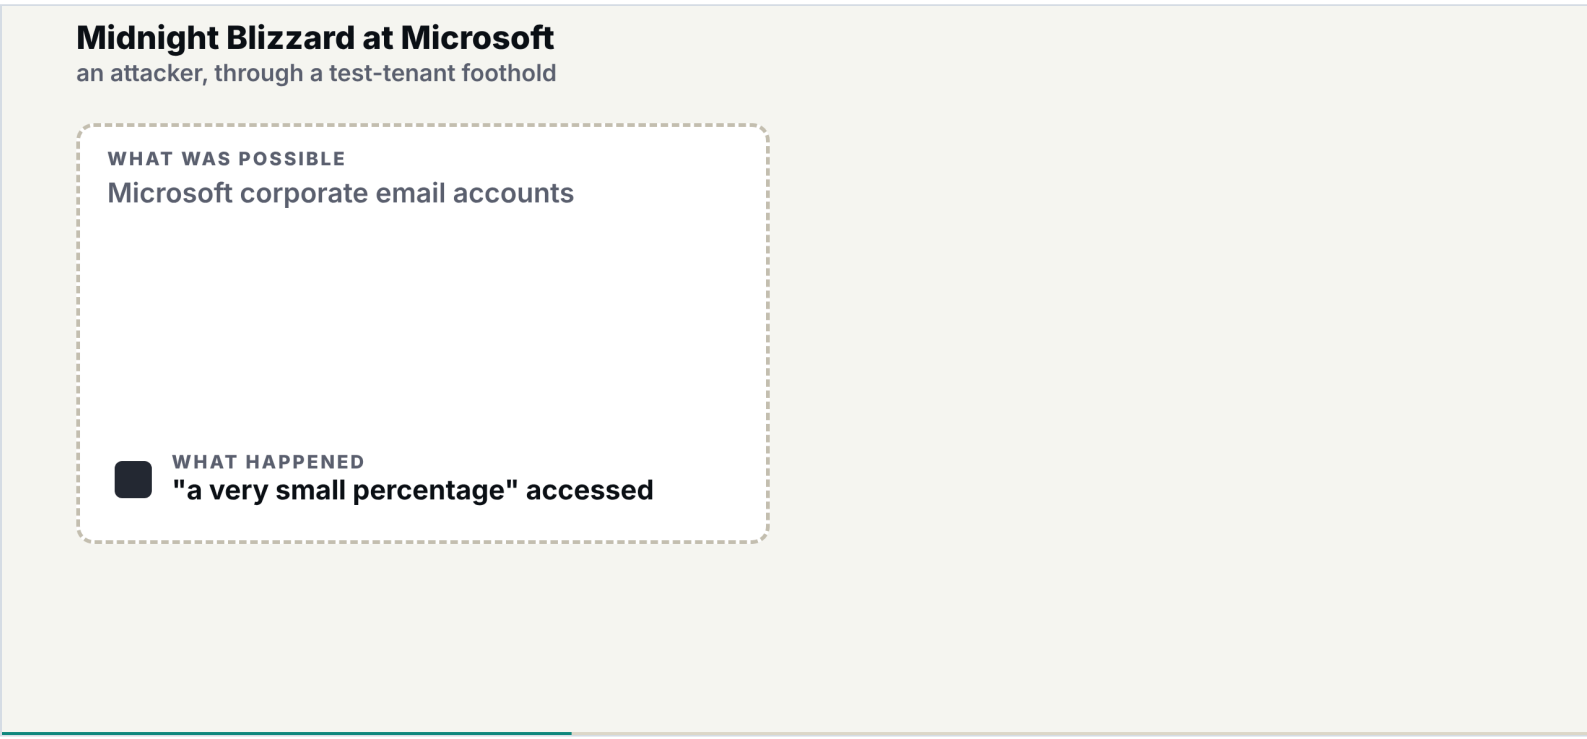

MADE FROM

- `src/static/motion/lab/could-have-been-worse/v1/index.html` at `f45028c` in the talk's repository (read only), unchanged at 298be4e
- its two public sources as it names them: Microsoft MSRC, 19 January 2024; AWS security bulletin AWS-2025-015

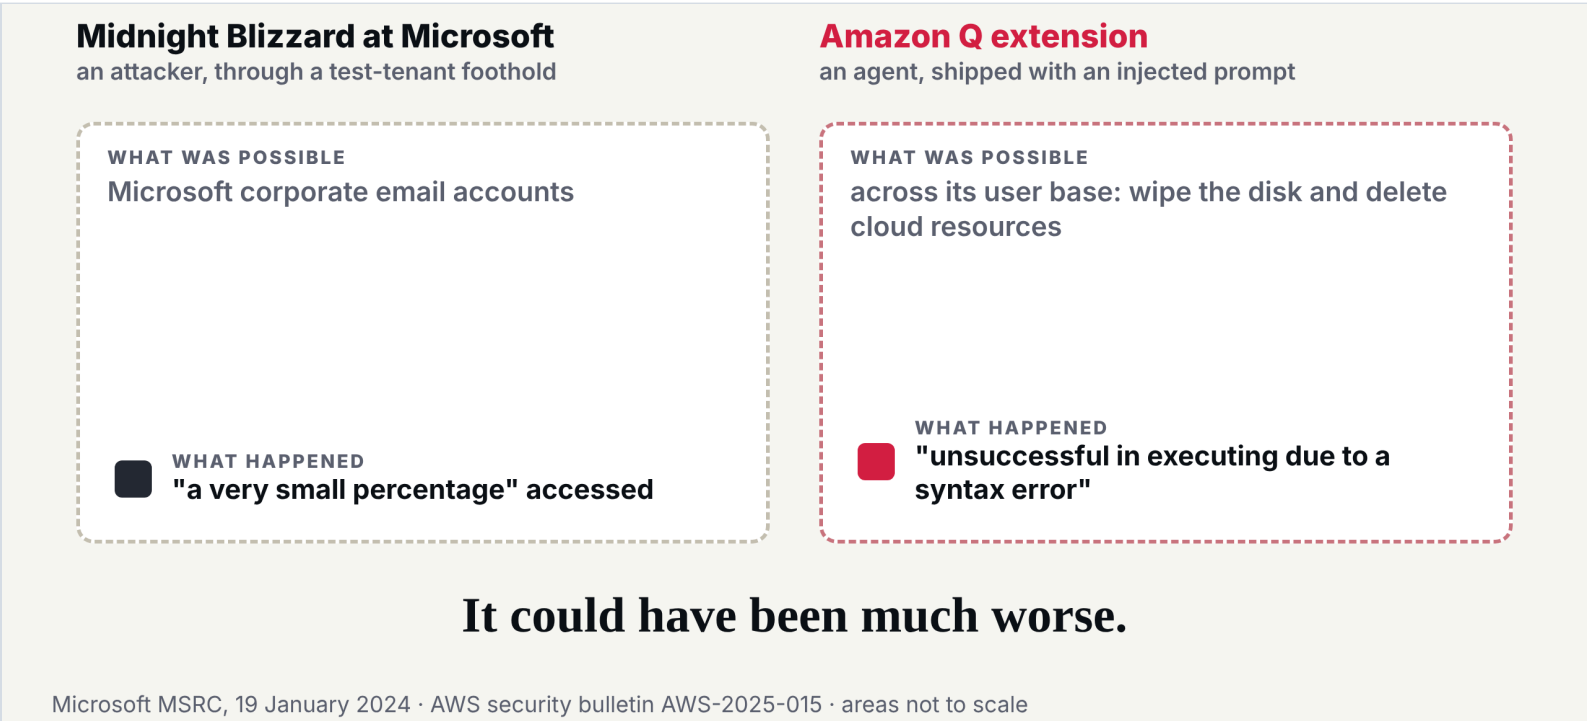

THE QUESTION

Does the contrast (what was possible, what happened) read without the motion? Is one frame enough, the still on its own?

☐ keep ☐ change ☐ drop note _____

0:11 What the way in could have reached.
The first incident alone: what was possible, then what happened.

It could have been much worse.

Microsoft MSRC, 19 January 2024 · AWS security bulletin AWS-2025-015 · areas not to scale

0:32 Each time, a small part of what was possible.
Both incidents side by side, and the line the room was left with.

Two public incidents, as their vendors reported them. "What was possible" is the talk's reading; "what happened" is the vendor's. M02 v1, src/static/motion/lab/could-have-been-worse/v1/index.html at f45028c, frozen at 11.5 and 32 s; cropped below its headline, printed once under each frame; areas not to scale (the animation's own note)
