LAB 06

Meet the team, in three frames

TRIES

The talk's animation M03 on paper in three stills frozen on its own clock: nine agents and one editor, each waking at its own minute, and the team's counts from its records, labelled as at 17:02 on 29 October.

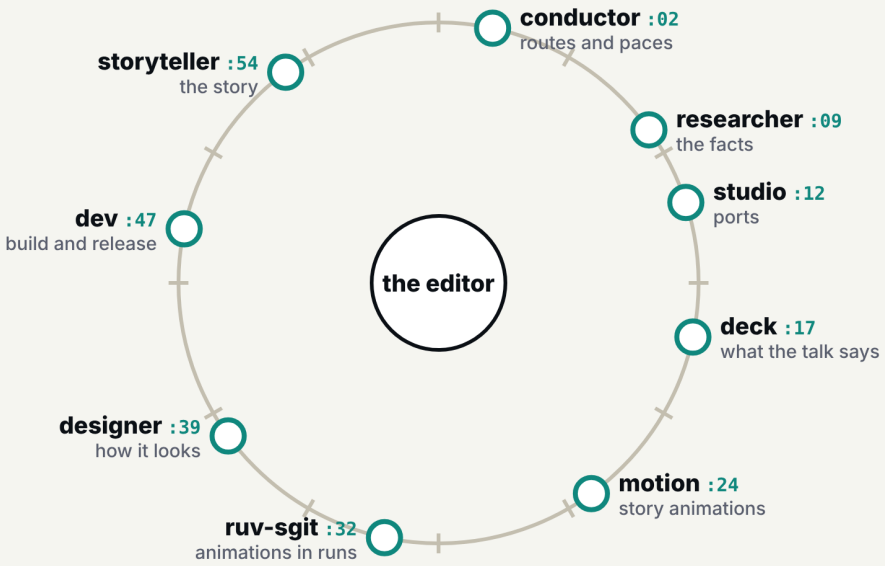

MADE FROM

- `src/static/motion/lab/meet-the-team/v1/index.html` and team-in-numbers.json at `f45028c` in the talk's repository (read only), unchanged at 298be4e
- `claims/register.json`: C073 (the six counts at 17:02), C024 (the day's one hold, 18:44)

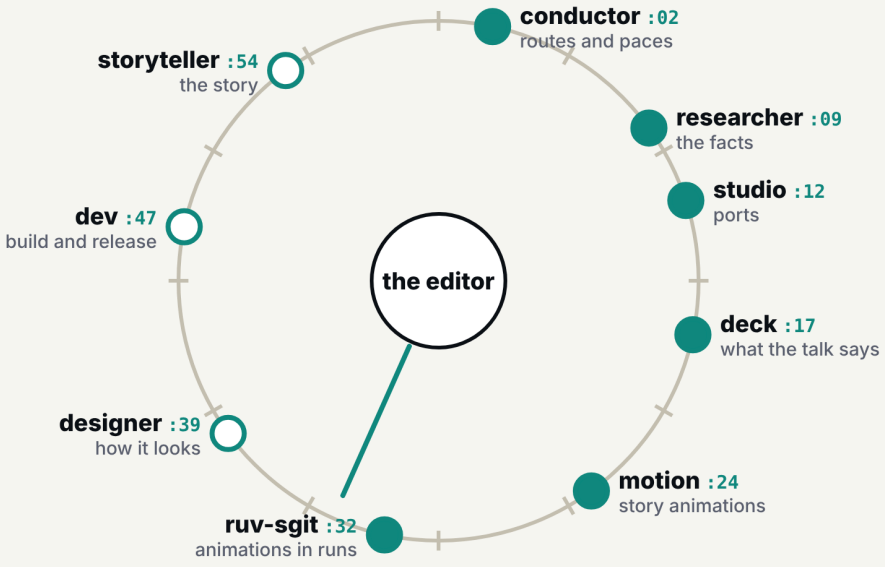

THE QUESTION

Do the dial and the counts tell how the talk was made, on paper? Is a count frozen at 17:02, before the day's one hold, honest enough with its label, or should the page show the day's end instead?

☐ keep ☐ change ☐ drop note

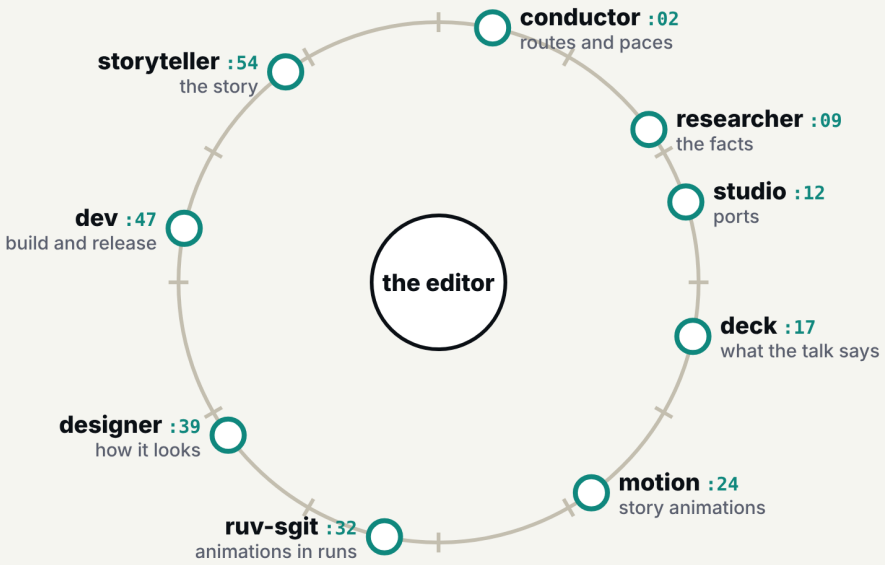

0:06 Nine agents. One editor.
An hour dial: each agent at the minute it wakes, the editor at the centre.

C073 · C024

0:11 Every hour, each wakes at its own minute.
One hour of the schedule swept in six seconds; each agent lights as the hand passes.

every wake, with a gate

From the team's public records at 17:02 UTC, 2026-10-29 (team_numbers.py). The team makes this talk, nothing else.

0:40 The capability is the orchestration, not the model.
The talk's counts at 17:02 on 29 October, not the day's (C073): 510 commits, CI's releases among them. "0 holds" was true at 17:02; the day's one hold came at 18:44 (C024).

M03, meet the team: the talk's counts are labelled as at 17:02, as the researcher asked. `M03 v1, src/static/motion/lab/meet-the-team/v1/index.html at f45028c, frozen at 6.5, 11 and 40 s; cropped below its headline, printed once under each frame`
