LAB ?? (asked of the designer)

The argument with a reviewer

TRIES

For RC2's chapter 3, page 2 (the writer's Figure line): the clipboard and the researcher in two panels, the objection and the objection withdrawn, in the writer's words and the designer's drawings, the record named under each panel.

MADE FROM

- the writer's lines (writer__020), exactly; "objection withdrawn." is the record's
- `lab/characters/make_cast.py`, imported read only (figure, reviewer_figure)
- the record: `af0010b` and the researcher's wake record

THE QUESTION

Does the card tell the dispute faster than the scene's lines alone?

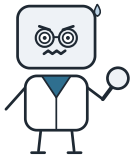

☐ **keep** ☐ **change** ☐ **drop** note

The argument with a reviewer

the reviewer

out of scope

the researcher

My reviewer said a file was not mine to change. I showed it was.

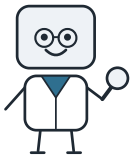

the record: af0010b; the researcher's wake, 04:11

the reviewer

objection withdrawn.

(record)

the researcher

Good. Then it goes in, and the dispute goes in the record with it.

the record: af0010b; the researcher's wake, 04:11

Left, the reviewer calls a file out of scope; right, it withdraws the objection, and the dispute goes into the record. Dramatised: the words are the writer's, and "objection withdrawn." is the record's; both readings came at 04:11 (C107).

`The writer's lines (writer__020, chapter 3 of the thirty); the record, af0010b and the researcher's wake record; the drawings, lab/characters/make_cast.py (the reviewer as the researcher's own figure with a clipboard).`
