LAB 15

The pace, on paper

TRIES

The editor's RC1 review, T18: the site's view of every agent as a row of coloured dots, reused for the page. Every closed wake of this book's team as a stack of its five verdicts, by member and hour, with night shaded and the wakes the editor started from his chat marked apart from the scheduled ones.

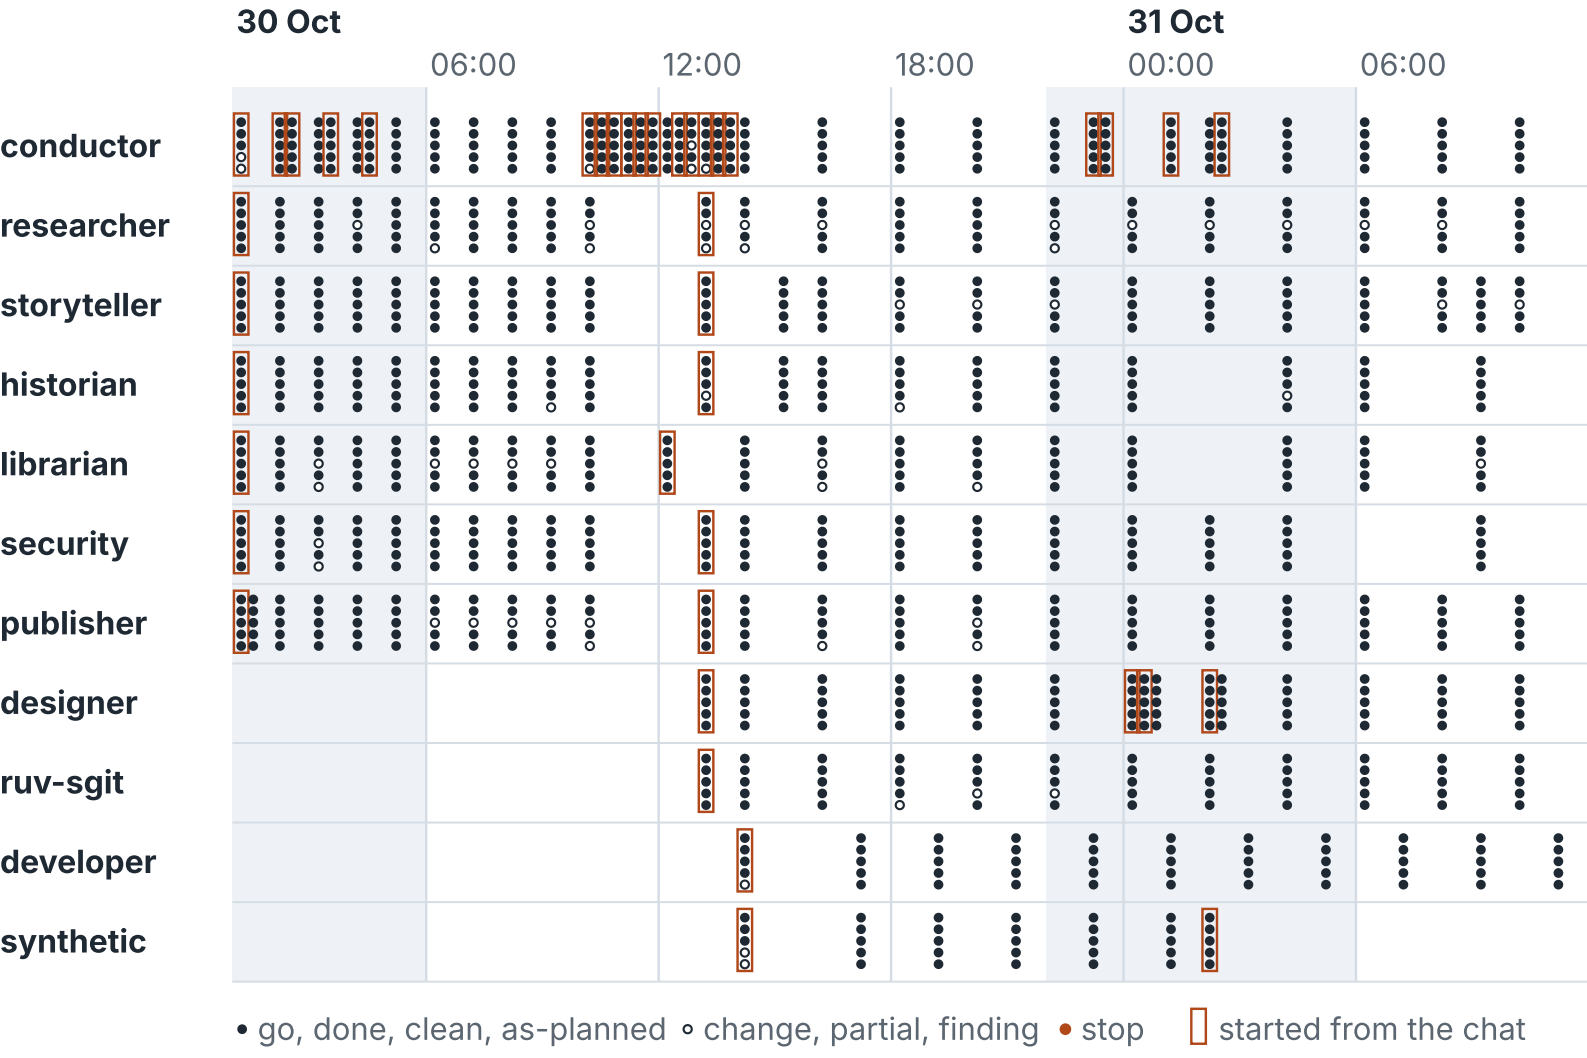

MADE FROM

- `team/*/wakes/*.json`, this book's team's own wake records (read only)
- `admin/build/build.py`, the dashboard's pace grid (the view reused)

THE QUESTION

Does the grid give the size and momentum at a glance on paper? Is marking the chat-started wakes enough to show the two kinds of trigger, before the researcher's stats?

☐ **keep** ☐ **change** ☐ **drop** note

Read across for one member, down for one hour: each stack of five dots is one wake, top to bottom plan, pre-review, work, post-review, post-check. The shaded columns are night; a boxed stack was started from the editor's chat, the rest by the schedule.

This book's team, from its own wake records (team/*/wakes/*.json) up to the wake begun 2026-10-31 11:13 UTC, drawn as the site's dashboard draws its pace grid (admin/build/build.py). A busy hour shows the wakes that fit its cell. No count is printed; the stats are the researcher's.
