LAB ?? (asked of the designer)

One picture's three rounds

TRIES

RC2 seventy, chapter 7 (its owner named by the conductor): the talk's blast-radius picture in its three versions side by side, sent back, kept with notes, kept for the editor, with deck's verdict under each in its own words.

MADE FROM

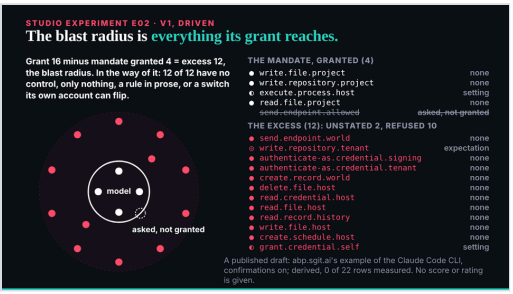

- the talk's own end-state stills of E02 v1, v2 and v3 at 298be4e (`team/ruv-sgit/debriefs/img/`, read only)
- deck's review pages and debrief at 298be4e, word for word
- `claims/register.json` C084 and C086 for the stills' numbers

THE QUESTION

Do three stills and three sentences show a team reviewing itself, faster than the scene's words?

☐ keep ☐ change ☐ drop note

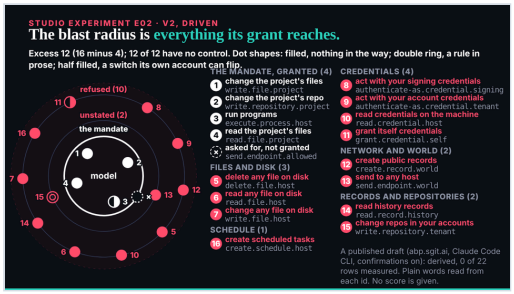

One picture's three rounds

The first round: sent back

"What it is not yet is a picture a room reads in five seconds."

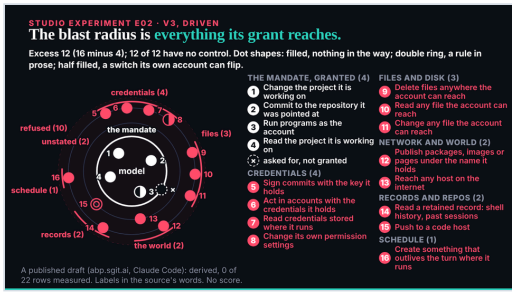

deck, 78b89b9

The second: kept, with notes for the next

"Numbered dots, plain words and named rings make it readable."

deck, eefc1d3

The third: kept, ready for the editor

"Three passes, and every note is in."

deck, 19e7f2d

The same data three times: a table beside a diagram, then numbered dots in named rings, then the dots grouped by what is at risk. Nobody was watching, and the picture was sent back, kept with notes, and kept for the editor. The dot numbers are labels, not counts. The talk's own stills at 298be4e (team/ruv-sgit/debriefs/img/); deck's words from its review pages and debrief there. The stills' numbers: C084 (grant, mandate, excess, rows measured) and C086 (the excess by kind).
