LAB ?? (asked of the designer)

The factory as a chain

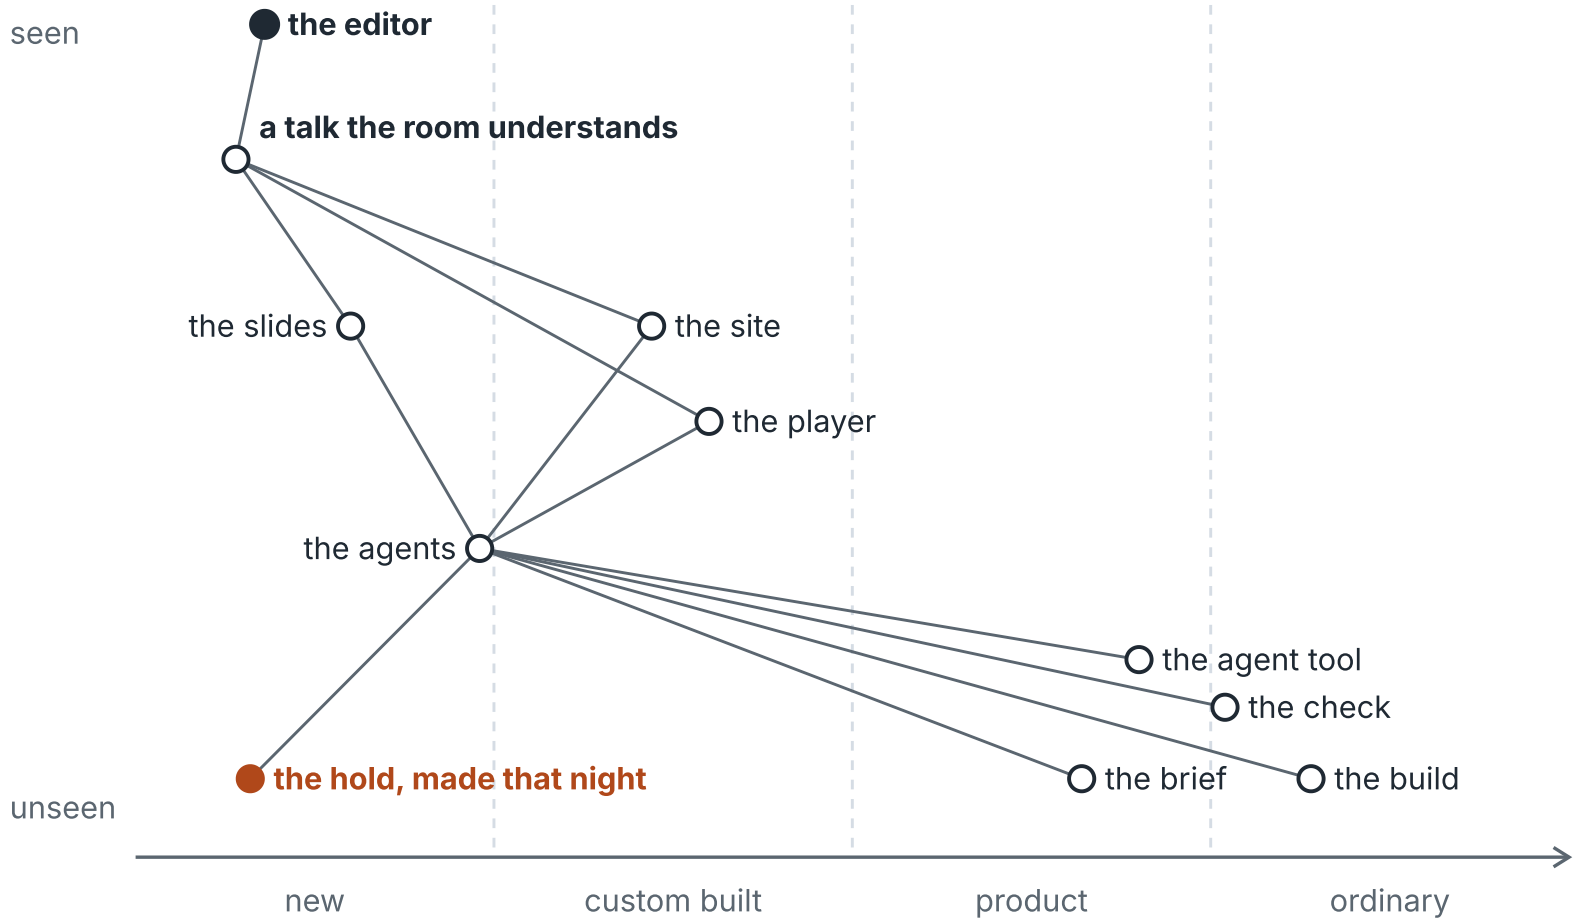

TRIES RC2 chapter 2's map (its owner named by the conductor): the factory as a Wardley map, placed by the chapter's own figure brief: the editor and his talk at the top, the slides, site and player, the agents, and at the bottom the ordinary parts and one new one, the hold.

MADE FROM
- `manuscript/rc2/30/02-the-factory-is-assembled.md`, the figure brief and the narrator (read only)
- `manuscript/00b-how-to-read-a-map.md`, its conventions and map 2's placements

THE QUESTION Does the bottom row say at once that the top could be built in a day?

☐ keep ☐ change ☐ drop note

The factory as a chain

Look at the bottom row first: almost all of it was already ordinary, so the top could be built in a day. The one new part at the bottom is the brake. Read down for what each part needs; read across for how settled it already was.

Placed by chapter 2's figure brief and narrator (manuscript/rc2/30/02-the-factory-is-assembled.md); the talk, slides, site and player as map 2 of "How to read a map" places them; the agents, which the brief does not place, at the new edge where the team was made that day: our reading.
