LAB 06

It could have been much worse, in two frames

TRIES

The talk's animation M02 on paper in two stills frozen on its own clock: one public incident, then both side by side with the line the room was left with. No words added but the time and a caption.

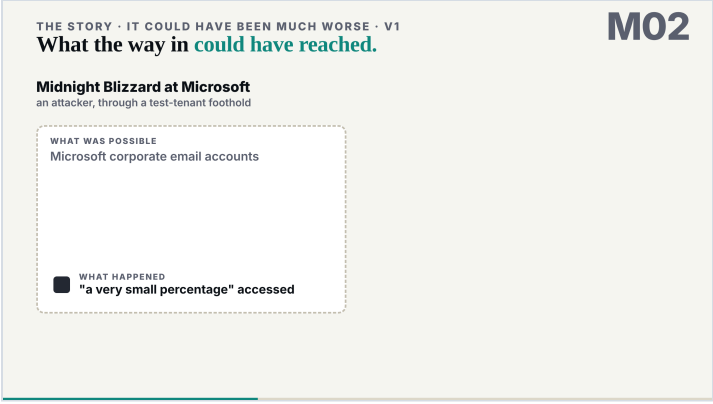

MADE FROM

- `src/static/motion/lab/could-have-been-worse/v1/index.html` at `f45028c` in the talk's repository (read only), unchanged at 298be4e
- its two public sources as it names them: Microsoft MSRC, 19 January 2024; AWS security bulletin AWS-2025-015

THE QUESTION

Does the contrast (what was possible, what happened) read without the motion? Is one frame enough, the still on its own?

☐ keep ☐ change ☐ drop note

0:11
What the way in could have reached: the first incident, alone.

0:32
Each time, a small part of what was possible. It could have been much worse.

Two public incidents, as their vendors reported them. "What was possible" is the talk's reading; "what happened" is the vendor's.
`M02 v1, src/static/motion/lab/could-have-been-worse/v1/index.html at f45028c, frozen at 11.5 and 32 s; areas not to scale (the animation's own note)`
