LAB 07

The rest of the talk's lab, on one contact sheet

TRIES

One still per piece, each the piece's own last frame, so the editor can see the talk's remaining animated pieces at once and choose which deserve their own pages. A piece whose last frame prints numbers not yet in the register is shown as an empty slot until it is.

MADE FROM

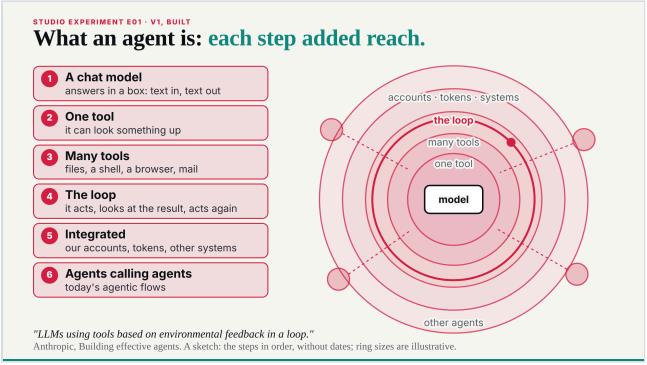

- the talk's repository at 298be4e (read only): `studio/lab` e01, e09, e10, e14, sharness; `studio-ports/lab` abp, abp-review, journey, policy-gate, pki (`src/static/...`), each frozen at its own end
- `claims/register.json`: none yet for the empty slots (asked of the researcher)

THE QUESTION

Is a contact sheet a good way to choose? Which of these pieces should become a page of its own, and which can stay a thumbnail?

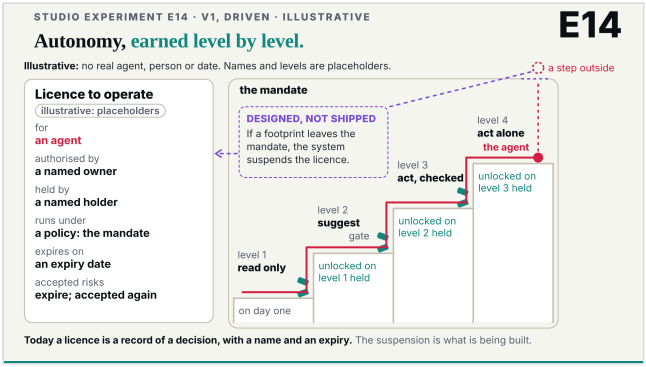

☐ **keep** ☐ **change** ☐ **drop** note

E01: what an agent is, the rings of reach

The steps from a chat model to agents calling agents, as rings of reach.
`src/static/studio/lab/e01/v1 at 0ffa9c8, its last frame`

E14: earning autonomy

A licence to operate, earned level by level. The piece says itself it is illustrative: no real agent, person or date.
`src/static/studio/lab/e14/v1 at 5247af0, its last frame`

Not on the sheet: the talk's other studio pieces (e02 to e08, e11 to e13) wait on security's answer; B01 is the designer's LAB 04; the port showcases without a timeline (abp-enforcement, abp-prose, fork, invest, open-source) are pages, not animations.

E09: mandate against grant

Waiting on the register: its last frame prints numbers not yet in claims/.

Counts of a policy's rows (mandate, grant, excess).
`src/static/studio/lab/e09/v1 at 842a8bd, its last frame`

E10: four barriers

Waiting on the register: its last frame prints numbers not yet in claims/.

Counts of rows behind each barrier.
`src/static/studio/lab/e10/v1 at eaf914f, its last frame`

SHarness: what exists and what is coming

Waiting on the register: its last frame prints numbers not yet in claims/.

A test count and dates.
`src/static/studio/lab/sharness/components/v1 at 842a8bd, its last frame`

ABP: real actions hit it, with receipts

Waiting on the register: its last frame prints numbers not yet in claims/.

Rule and action counts from a port of ruv.sgit.ai.
`src/static/studio-ports/lab/abp at 0fe0fff, its last frame`

The editor approves each policy, item by item

Waiting on the register: its last frame prints numbers not yet in claims/.

A time of day and counts.
`src/static/studio-ports/lab/abp-review at bd3cdad, its last frame`

One action's journey

Waiting on the register: its last frame prints numbers not yet in claims/.

Receipt numbers and counts.
`src/static/studio-ports/lab/journey at 0fe0fff, its last frame`

The policy gate (studio v4)

Waiting on the register: its last frame prints numbers not yet in claims/.

Allowed, denied and held counts.
`src/static/studio-ports/lab/policy-gate at 0fe0fff, its last frame`

How the register of people works

Waiting on the register: its last frame prints numbers not yet in claims/.

Counts and a year from pki.sgit.ai's page.
`src/static/studio-ports/lab/pki at 901bec1, its last frame`
