LAB ?? (asked of the designer)

Your factory

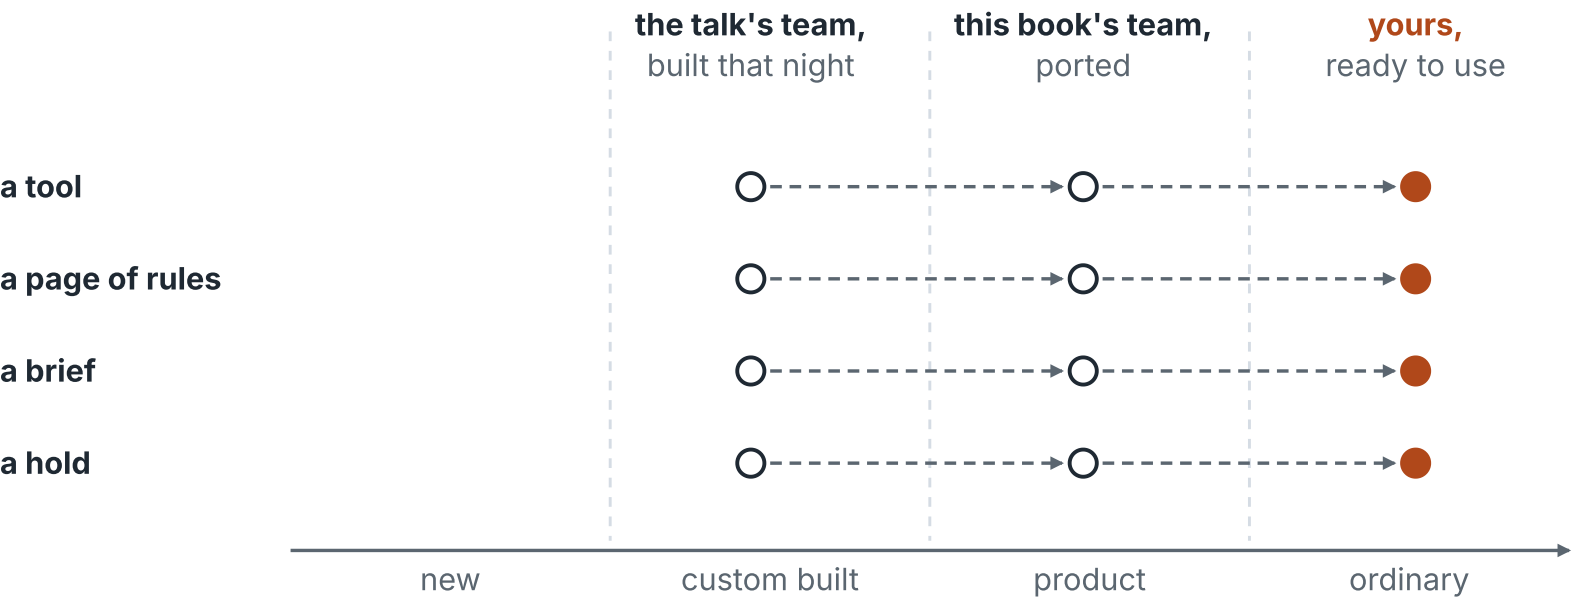

TRIES RC2 chapter 5's map, chapter 2's carried forward (left to ruv-sgit by the designer): the narrator's four parts, a tool, a page of rules, a brief and a hold, each moving right, from built that night by the talk's team, to ported by this book's team, to ready to use for the reader.

MADE FROM
- `manuscript/rc2/30/05-the-factory-rebuilt-and-yours.md`, its Map line and narrator (read only)
- `manuscript/00b-how-to-read-a-map.md`, its conventions

THE QUESTION Does the reader see their own place on the map, on the right, at once?

☐ **keep** ☐ **change** ☐ **drop** note

Your factory

Every part I had to invent, or carry over by hand, is already on the right for you: a tool, a page of rules, a brief and a hold. Chapter 2's map carried forward: read each row left to right, as one project's part becomes the next one's.

`Placed by chapter 5's Map line and narrator (manuscript/rc2/30/05-the-factory-rebuilt-and-yours.md), in the conventions of "How to read a map"; the dashed arrows are a Wardley map's marks for movement.`
